

Test-it-off

**Automate PCB testing.
Leave it to the robots!**

Test-it-off is a robotic quality controller that:

never gets tired,
even when working
overtime

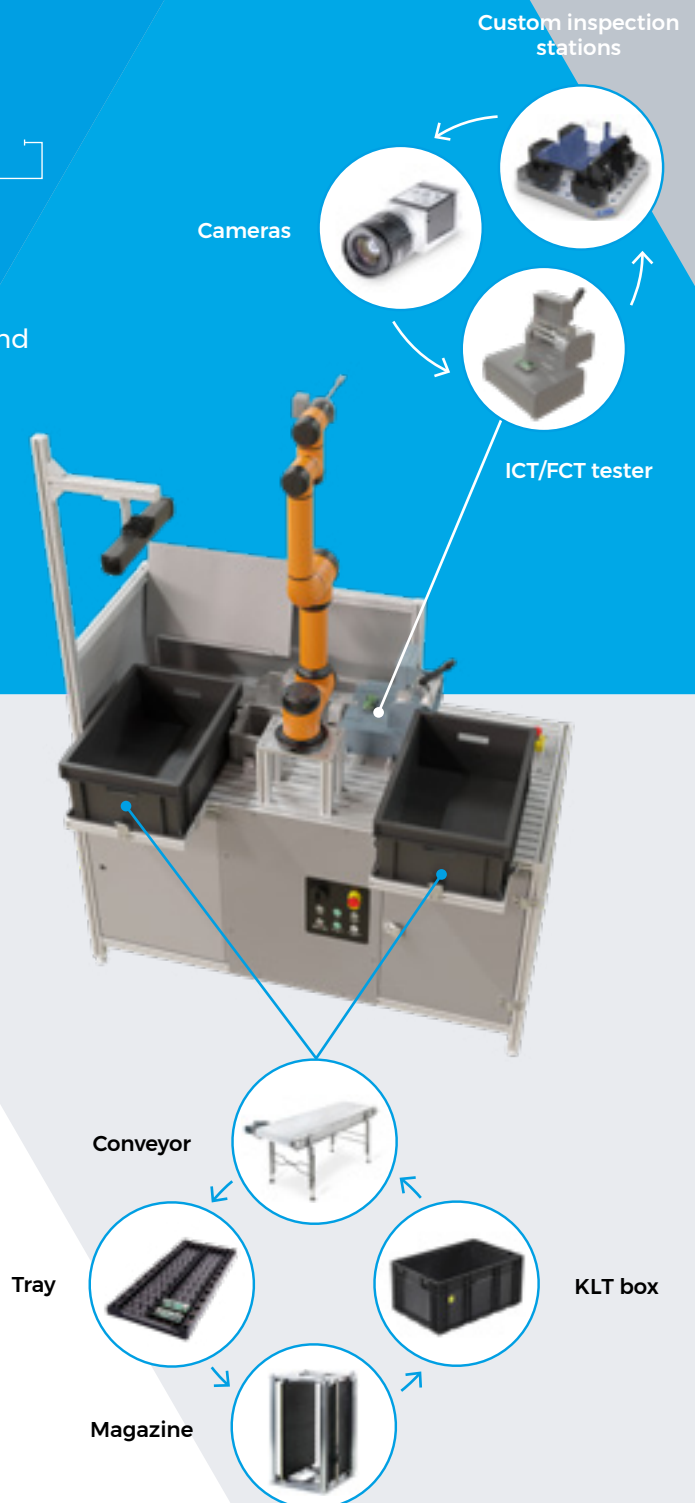

is always accurate,
reliable and fast

never leaves for
the competition
and never wants
a wage increase

is effective
and uses every second
of working time

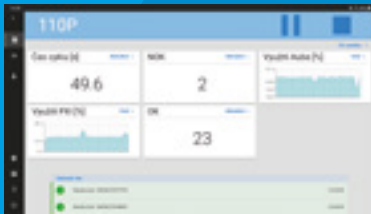

**Jump on the wave of Industry 4.0
and make better use of human
potential than with constantly
recurring activities!**

From a box, CAB magazine or convey-
or, Test-it-off easily sorts out defective
PCBs from your production. The smart
robotic system is able to work comple-
tely alone and even overnight.

What is the Test-it-off robotic system like?

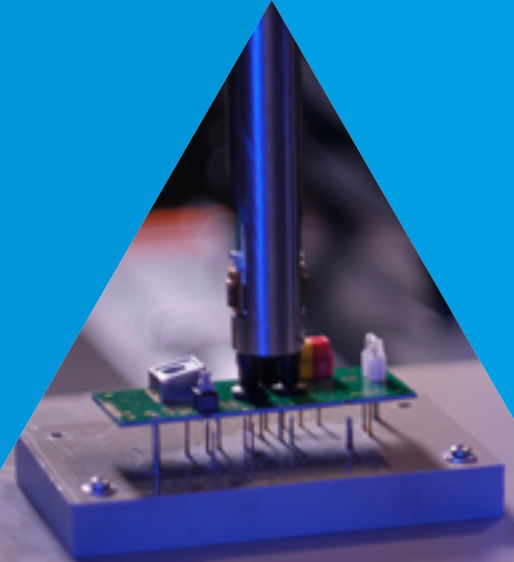

- ▶ **Indiscriminate** – it can select a PCB in any form, preferably just scattered in a box
- ▶ **Absolutely reliable** – able to work completely independently and even overnight
- ▶ **Variable** – easily manages the operation of common and user-modified ICT testers
- ▶ **Easy-to-use** – no one gets lost in the intuitive operator interface

- ▶ **Easy programming when changing PCBs** – anyone can handle the innovative approach to workstation programming with the involvement of augmented reality elements

- ▶ **Absolutely safe** – uses AUBO collaborative robots for handling
- ▶ **Intelligent** – the collaborative AUBO robot avoids obstacles when handling
- ▶ **Affordable** – fast return on investment within two years
- ▶ **Ready for Industry 4.0** – offers broad support for connectivity and statistics for surrounding production nodes, supports 100% traceability of results over time
- ▶ **Universal** – easily expandable with additional operations such as reading EAN codes or gluing labels

This project was implemented with financial support from the state budget through the Ministry of Industry and Trade in the TRIO programme.
